

CAPING A DEER

STEP 1: Ensure adequate hide for the mount. Cut around animal's midsection half way between front and rear legs.

STEP 2: Cut around legs a few inches below elbow joint.

STEP 3: For each front leg, make a cut between cut below elbow and midsection cut.

STEP 4: Carefully peel skin from rear to head. Once neck is exposed, but prior to head make cut to release head and cape from carcass.
